General gynaecology

Well woman consultations, inclusive of history taking, general and gynaecological examination, PAP smear, and a vaginal probe ultrasound survey of the pelvic organs is the mainstay of the practice. Special interest and care are offered to young and menopausal patients. Menopausal counselling and management is inclusive of natural, hormonal, and alternative modalities of treatment, when indicated. A DEXA bone densitometry can be done at the time of the visit, and immediate management is initiated if required, therefore eliminating extra consultations. Repeat prescriptions and chronic medication repeats up to one year are free and posted by email, on request.

Yours sincerely,

Dr E. P. Frohlich
